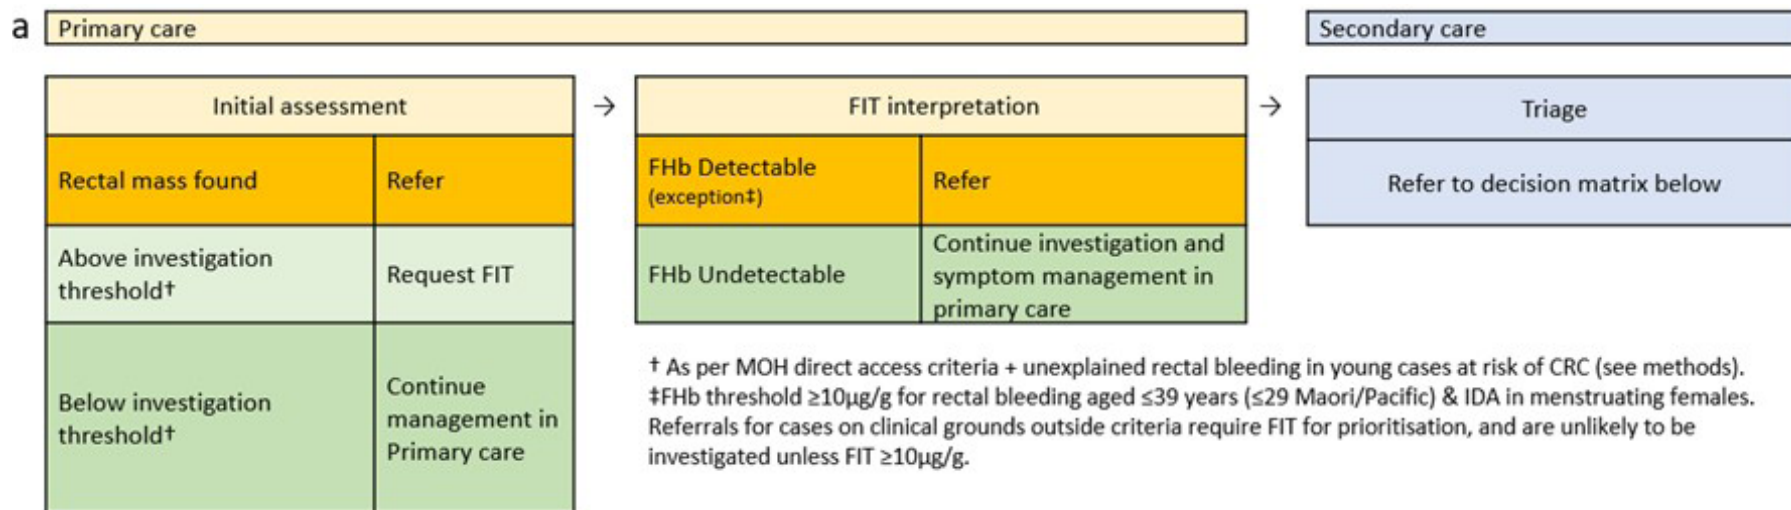

**Figure 3:** Forrest plots of studies reporting the diagnostic accuracy of a single rule out FIT for CRC.

a and b: sensitivity and specificity at >10mcg/g respectively.  
 c and d: sensitivity and specificity at LoD respectively.

Figure 4: Canterbury colorectal symptom pathway. a: Patient flow diagram. b: Secondary care decision aid.

**b**

Any age	Imaging abnormality	Mass palpable or visible on rectal examination	Iron deficiency anaemia with or without rectal bleeding (IDA) <small>&lt;55 female require menstrual history. Exclude CD and urinary losses.</small>		Rectal bleeding† with or without change in bowel habit (RB) <small>†Benign anal causes treated or excluded.</small>	Altered bowel habit (ABH) <small>looser and or more frequent</small>		Other clinical presentations		
			FHb result	Outcome		FHb result	Outcome			
Triage according to acuity of finding	Triage according to acuity of finding		$\geq 150\mu\text{g/g}$	Urgent colonoscopy (2)	$\geq 50$	$\geq 150\mu\text{g/g}$	Urgent colonoscopy (2)	Exclude coeliac disease and follow local suspected IBD pathway where appropriate.  Consider referral if symptomatic and high risk for colorectal cancer e.g. Family history category 2 or 3 and FIT detectable  Other referrals of symptomatic patients with FHb $< 10\mu\text{g/g}$ not considered except in rare situations		
			Detectable $< 150\mu\text{g/g}$	Colonoscopy (14)		$\geq 10$ to $< 150\mu\text{g/g}$	Colonoscopy (14)		$\geq 10$ to $< 150\mu\text{g/g}$	Colonoscopy (31)
			Undetectable	Triagers discretion (141, 90)		Detectable $< 10\mu\text{g/g}$	Colonoscopy (48)		Detectable $< 10\mu\text{g/g}$	Triagers discretion (105)
Triage according to acuity of finding	Triage according to acuity of finding				40 to 49	Undetectable	Decline (237, 151)			
			$\geq 150\mu\text{g/g}$	Urgent colonoscopy (3)		$\geq 10$ to $< 150\mu\text{g/g}$	Colonoscopy (27)			
			Detectable $< 10\mu\text{g/g}$	Triagers discretion (91)		Detectable $< 10\mu\text{g/g}$	Triagers discretion (91)			
Triage according to acuity of finding	Triage according to acuity of finding				$\leq 39$	Undetectable	Decline (458, 292)			
			$\geq 10\mu\text{g/g}$	Triagers discretion (33)		$\geq 10\mu\text{g/g}$	Triagers discretion (33)			
						$< 10\mu\text{g/g}$	Decline (1022, 895)			

Numbers in parenthesis are NNI for accepted categories and NND for declined categories. For declined categories, two numbers are presented; the NND based on the summary NLR, and the NND at the upper 95%CI of NLR (worst-case scenario).

**Table 2:** Colorectal cancer prevalence, and number needed to investigate or decline according to symptom and FHB threshold.

Category	2018 Canterbury dataset*		Calculated case number by FHB threshold or range

\*excluding 88 cases (9 CRC) referred with a rectal mass, and 214 cases (2 CRC) referred for concern regarding inflammatory bowel disease.

IDA: iron deficiency anaemia

RB: rectal bleeding

ABH: altered bowel habit

CRC: colorectal cancer

NNI: number needed to investigate to detect one cancer

WC: NND at upper 95% CI of the NLR (worst case scenario)

**Table 3:** Overall sensitivity, specificity, and resource implications of proposed pathway.

Criteria	Colonoscopy per 1,000 referrals	Expected CTC per 1,000 referrals	Sensitivity for CRC (95% CI)	Specificity for CRC (95% CI)	NNI	NND
MOH direct access criteria	775		90.5 (84.0–95.0)	24.0 (22.4–25.6)	21	56
Urgent referral for colonoscopy ACPG-BI/BSG 2022 <sup>7</sup>	250		89.6 (82.1–93.8)	77.9 (76.4–79.4)	7	171
Canterbury pathway	407*	81	97.1 (92.1–99.1)	54.2 (52.3–56.0)	12	426

\*includes 10% conversion from CTC to colonoscopy.

NNI: number needed to investigate.

NND: number needed to decline.

CTC: computed tomography colonography.

CRC: colorectal cancer.

ACPGBI/BSG: Association of coloproctology of Great Britain and Ireland/British Society of Gastroenterology.

**Table 4:** Negative likelihood ratios for rule out thresholds of FIT calculated from contemporary meta-analyses.
