

Table 1: Patient and sessile serrated lesion (SSL) characteristics.

Patient characteristics	
Patients (n)	39
Procedures (CTC)	39
Males	20 (51.3%)
Females	19 (48.7%)
Median age	62 (interquartile range 62–79)
SSL characteristics	
Total SSL	110
Dysplastic SSLs	0
SSL <10mm	94
SSL >10mm	16
At least one SSL detection per CTC	30.8% (12 procedures)
% SSLs correctly identified by CTC	14.5% (16/100)

SSL = sessile serrated lesion; CTC = computed tomography colonography.
